Corporate governance can be defined as a “Corporate governance involves a set of relationship between a company’s management, its board, its shareholders and other stakeholders also the structure through which objectives of the company are set, and the means of attaining those objectives and monitoring performance are determined” (Organization for economic Co-operation and Development principle of corporate Governance-2004). Corporate Governance is widely spreader concept. It consists of many factors such as ownership structure, board meeting, CEO duality ..etc. Therefore, it is very difficult to look all these factors at once. Ownership Structure is one main characteristic of Corporate Governance. Therefore to get the deep understand about the relationship between ownership structure and firm performance would be very useful.

The Objective of this research is to find about the relationship between ownership and financial performance, how the Ownership structure makes the significant impact on company performance in manufacture sector companies on Sri Lanka.
