Abstract

The value of the places which we find in the record of kegalle has increased even more at present. This record dates back to the 1890 AC. Also the stupas and shrines which were new at that time have become ancient heritages today. In order to visualize the importance of these historical places, the heritage of the kegalle area is reported here. So the first chapter includes the title, researches, objectives, methodologies and a chapter for the previous research and for the structure of the research. The case studies are to reveal the hidden history of the kegalle area in depth. The second chapter is about the historical importance of kegalle district, its ancient geographical division and also the importance of the selected geographical boundary and discusses the reasons for selecting the area.

The third chapter contains an introduction to the research sector, research methodologies and individual study areas. It includes a name list of selected areas.

From the fourth chapter, some chapters are reserved for some selected stupas. In that case there is a whole chapter discussing historical importance, location and heritage value and also it includes route maps for the selected areas and archeological data. For that I have included information by observing places and by using written descriptions. This visual value is added by adapting maps, photographs and art works.

The final two chapters points out in common about the relative importance of the above areas and ends up by giving an analytical study and hinting about the proposals and the conclusions.

Key words:-

Conservation, Epigraphy, Heritage, Paintings, Preservation.
