The Tsunami village is located in Tangalle, Southern Province since 2005. This village had donated by non-government organization to Sri Lankan government. The refugees had been re-located by the Sri Lankan government. There are about 100 houses in this village. A lot of people suffer various problems according to their life styles. They are having a lot of problems in various sectors such as education, health and economic. According to my case study I selected 20 houses for my research. According to my research I found lots of errors in house construction and location of the houses according to Vāstuvdyā theories. There are main four directions of locations. Some house schemes have been facing healthy problems according to location of their houses. Also, their education and economic depend on construction. Some people of this village had changed Vāstuvdyā errors of their houses and they became success. According to Vāstuvdyā theories lots of houses having lots of Vāstuvdyā errors. As a conclusion, the people and their life style of this village has depend on conditions and locations of their houses.
