Electronic Resources have become a necessity in the modern information society. Today information and communication technology has given more opportunities for the information seekers, scholars and researchers. This new trend has changed expanded and added value to the library collections as well as has widened the scope of the library user communities. E Resource comes with various forms such as E-books, E-Journals, E-Databases etc. Through the electronic media temporary academic staff makes aware himself with the current information and updates.

The study investigated the usage of E-resources by the Temporary staff. The objectives of the study were to examine how the university temporary staff search required information through the e-resources and how they use e-resources for their academic purposes. Structured questionnaires were distributed among all the temporary staff in the Faculty of Social Science, University of Kelaniya.

Questionnaire was the main data gathering method. It was identified that from the total population only 74% use electronic media for their academic works. According to the results 40% percent of temporary staff uses e-books to search information, 15% percent use online databases and 19% Percent of students use e-Journals. 26% Percent of staff didn’t appear to use electronic media for their academic purposes. Major Reason for this issue is staff used to go for the university library for search information without electronic concept. Other Problems were lack of awareness about electronic media, Connection problems Suggestions were made to conduct training sessions, workshops in order to awareness among stakeholders.
