

Quality of Qualitative Research: A Grounded Theory (GT) Approach with Special Reference to Straussian GT

Udaya Mohan Devadas¹

This review was dedicated to discuss the core measures established evaluating the quality of Grounded Theory (GT) that have been highlighted by the main authors of GT with special reference to Straussian GT. Straussian GT includes the work of Strauss and Corbin (1990 & 1998); Corbin and Strauss (2008); and Charmaz (2006). Glaser alone develops the Glasarian GT approach. First, I explained the concept of evaluation of research in relation to its quality discussing some rigorous methods of establishing quality in qualitative research. Second and finally, the specific canons and procedures established especially in the Straussian GT methodology in establishing quality were discussed. Here, the related content in the ground breaking research of Glaser and Strauss in 1967 has been first referred following the Glaser's (1998) views in this regard before discussing the Straussian perspective on quality in GT research.

Keywords: *Grounded Theory, Straussian Grounded Theory, Quality, Qualitative Research*
