During the last two decades listening comprehension has received considerable attention, in the fields of applied linguistics, psycholinguistics and second language pedagogy. Listening is a complex cognitive process, in which the listener constructs the meaning using both the linguistic and non-linguistic knowledge. This study attempts to find out how psycholinguistic knowledge facilitates in improving proficiency in L2 listening skills. It is hypothesized that the psycholinguistic elements which are involved in listening skills could be introduced to both the teachers and learners to obtain mastery in the skills. A convenient sample of forty five, first year students from the Faculty of Arts were randomly selected as sample fro the study. The data collection was done by questionnaire survey and teachers’ observation. A qualitative analysis was carried out to gather information and to analyze data. Through the analysis it was found that the role of Psycholinguistic knowledge in improving proficiency in L2 listening skills is indispensable to obtain proficiency in listening skills. This study recommends that the learners need to familiarize the psycholinguistic elements which are indispensable for the improvement in the listening skill proficiency. Finally the undergraduates of the university with less proficiency in listening skills could be facilitated and enabled to improve their proficiency in listening skills.

Key Words: ESL, Psycholinguistic, Listening Skills, Proficiency in L2, Undergraduates
